# 《数据库系统》实验报告

 实验名称:
 MIS 系统开发

 成
 绩:

 专业班级:
 1403106

 姓
 名:

 张茗帅

学 号: \_\_\_1140310606\_\_

实验日期: 2017年 5月28日

实验报告日期: 2017 年 5 月 28 日

# 一、实验目的

通过高级语言和嵌入式 sql 开发 MIS 系统,对 MIS 应用系统进行分析和数据库设计,绘制出 E-R/IDEFIX 图

#### 实验环境:

- ◆ Mysql 或 SqlServer 数据库
- ◆ 自行选择高级语言和开发工具,可以使用 C、Java、PHP 等语言

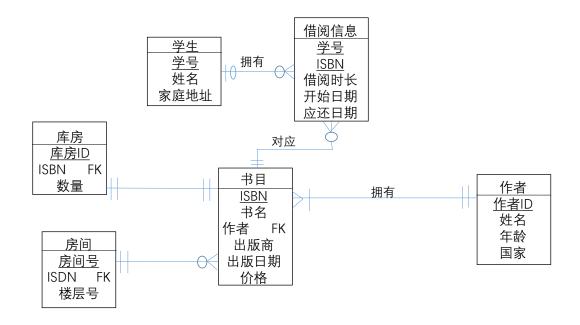

# 二、实验内容

- 1) **MIS** 系统的题目和内容自选(如学生学籍管理系统,医疗档案管理系统,图书管理系统等等)。
  - 2) 至少包含5个以上的库表。
  - 3) 有交互式界面,能通过界面插入、修改和删除数据,能够实现一些简单的查询操作。
  - 4) 根据 MIS 系统的需求确定用到的实体,属性和联系
  - 5) 将实体,属性和联系转化为 E-R 图

# 三、实验结果

# ▶ 给出 MIS 系统的 ER 图

## 图书管理系统ER图

## > 列出所设计的数据库表结构。

按照我所设计的 ER 图可知,一共有六个表,如下:

注: 其中 house 表对应 "库房"实体; room 表对应 "房间"实体; author 表对应 "作者"实体; book 表对应 "书目"实体; student 表对应 "学生"实体; borrow 表对应 "借阅信息"实体;

通过 show columns from 表名 和 show create table 表名字来展示该表的结构 author 表的结构如下:

```
nysql> show create table author;
: Table
          ! Create Table
 author | CREATE TABLE 'author' (
'AuthorID' smallint(5) unsigned NOT NULL DEFAULT '0',
  'Name' varchar(20) NOT NULL,
'Age' smallint(5) unsigned DEFAULT NULL,
  'Country' varchar(30) DEFAULT NULL,
 PRIMARY KEY ('AuthorID')
ENGINE=InnoDB DEFAULT CHARSET=utf8 :
 row in set (0.02 sec)
nysql> show columns from author;
 Field
             ! Type
                                         | Null | Key | Default | Extra
 AuthorID | smallint(5) unsigned | NO
                                                 : PRI : 0
             | varchar(20)
                                          NO
                                                         HULL
 Name
                                                 Н
                                                                     Н
             | smallint(5) unsigned | YES
                                                         HULL
 Age
                                                                     H
 Country
             | varchar(30)
                                         ! YES
                                                         HULL
                                                                     Н
4 rows in set (0.02 sec)
```

#### book 表的结构如下:

```
book ! CREATE TABLE 'book' (
 'ISBN' bigint(20) unsigned NOT NULL DEFAULT '0',
'Title' varchar(30) NOT NULL,
 'AuthorID' smallint(5) unsigned NOT NULL,
 'Publisher' varchar(20) DEFAULT NULL,
 'PublishDate' date DEFAULT NULL,
 'Price' double(5,2) unsigned DEFAULT NULL, PRIMARY KEY ('ISBN'),
 KEY 'AuthorID' ('AuthorID'),
 CONSTRAINT 'book_ibfk_1' FOREIGN KEY ('AuthorID') REFERENCES 'author' ('AuthorID')
 ENGINE=InnoDB DEFAULT CHARSET=utf8 :
 row in set (0.00 sec)
mysql> show columns from book;
 Field
                                        ! Null | Key | Default | Extra |
               ! Type
ISBN
              | bigint(20) unsigned | NO
                                               : PRI : 0
 Title
               | varchar(30)
                                        l NO
                                                       NULL
              | smallint(5) unsigned
 AuthorID
                                       I NO
                                               : MUL
                                                     HULL
                                                                         H
                                                                R
 Publisher
              | varchar(20)
                                        ! YES
                                                       NULL
 PublishDate | date
                                         YES
                                               П
                                                      ! NULL
                                                                н
 Price
               ! double(5,2) unsigned ! YES
                                                      HULL
                                                                Н
 rows in set (0.02 sec)
```

#### student 表的结构如下:

```
mysql> show create table student;
! Table
          ! Create Table
                                П
| student | CREATE TABLE 'student' (
  'snumber' varchar(10) NOT NULL,
  `sname` varchar(20) NOT NULL,
`saddr` varchar(40) NOT NULL,
 PRIMARY KEY ('snumber')
 ENGINE=InnoDB DEFAULT CHARSET=utf8 !
1 row in set (0.00 sec)
nysql> show columns from student;
           ! Type
| Field
                          | Null | Key | Default | Extra |
| snumber | varchar(10) | NO
                                  PRI : NULL
                                                   Н
                                                            Н
          ! varchar(20) ! NO
                                        HULL
                                                            H
                                                   Н
 sname
                                  Я
          ! varchar(40) ! NO
 saddr
                                        HULL
                                                   Н
3 rows in set (0.01 sec)
```

## borrow 表的结构如下:

```
nysql> show create table borrow;
! Table ! Create Table
| borrow | CREATE TABLE 'borrow' (
  'snumber' varchar(10) NOT NULL,
  'isbn' bigint(20) NOT NULL,
  'day' int(11) DEFAULT NULL,
  'beginday' date DEFAULT NULL,
  'endday' date DEFAULT NULL
ENGINE=InnoDB DEFAULT CHARSET=utf8 :
1 row in set (0.05 sec)
mysql> show columns from borrow;
| Field
           : Type
                         | Null | Key | Default | Extra |
| snumber | varchar(10) | NO
                                      HULL
                                                H
                                Я
           | bigint(20) | NO
                                      HULL
                                                Н
: isbn
                                Н
                                      HULL
                         : YES
 day
           ! int(11)
                                Н
                                                H
                                      HULL
 beginday | date
                         : YES
                                Я
                                                H
                         : YES
                                      HULL
 endday
           date
                                R
                                                H
5 rows in set (0.02 sec)
```

#### room 表的结构如下:

```
mysql> show create table room;
! Table ! Create Table
 room | CREATE TABLE 'room' (
'rnumber' int(11) NOT NULL,
  'isbn' bigint(20) unsigned NOT NULL DEFAULT '0',
'floor' int(11) DEFAULT NULL,
 KEY 'isbn' ('isbn'),
CONSTRAINT 'room_ibfk_1' FOREIGN KEY ('isbn') REFERENCES 'book' ('ISBN')
 ENGINE=InnoDB DEFAULT CHARSET=utf8 :
 row in set (0.00 sec)
mysql> show columns from room;
 Field
                                     ! Null ! Key ! Default ! Extra !
           : Type
 rnumber | int(11)
                                     : NO
                                             1
                                                    ! NULL
           | bigint(20) unsigned | NO
 ishn
                                             ! MUL ! 0
                                                                          П
 floor
           ! int(11)
                                     : YES :
                                                    ! NULL
3 rows in set (0.02 sec)
```

## house 表的结构如下:

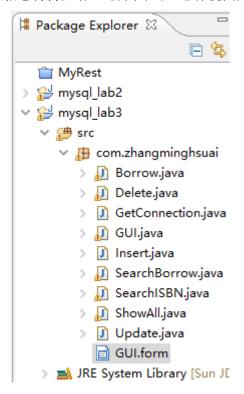

```
mysql> show create table house;
 Table | Create Table
 house ! CREATE TABLE 'house' (
  'hnumber' int(11) NOT NULL,
  'isbn' bigint(20) unsigned NOT NULL DEFAULT '0',
  'count' int(11) DEFAULT NULL,
 KEY 'isbn' ('isbn'),
CONSTRAINT 'house_ibfk_1' FOREIGN KEY ('isbn') REFERENCES 'book' ('ISBN')
 ENGINE=InnoDB DEFAULT CHARSET=utf8 :
 row in set (0.00 sec)
nysql> show columns from house;
 Field
          ! Type
                                  | Null | Key | Default | Extra
 hnumber | int(11)
                                  : NO
                                         Н
                                               HULL
 isbn
          | bigint(20) unsigned | NO
                                         ! MUL ! 0
          | int(11)
                                  ! YES
                                               HULL
 count
                                         Н
                                                          Н
3 rows in set (0.02 sec)
```

## 简述程序实现的具体过程

首先创建我所需要的六个表,然后开始设计 UI 界面,我的 GUI 界面通过 matisse 插件基于 swing 下的 jFrame 框架进行制作的,只需在面板上进行控件拖动,界面做好后保存自动生成代码,最后设计的 GUI 界面如下图:

🖺 Library Management System designed by ZhangMingshuai — 🗆								
□图书:ISBN 书名 出版日期 价格			号		学.	习		
楼层		房间号	lā	き我们	4 4	:		
□ 作者: 作者ID 姓名	年龄	国家	13		へ 小	•		
□ 学生: 学号 姓名	地址		Study alway	ys makes n	ne happy	v !!!		
插入更新	删除	返回信息:			Pemainin			
学号	N	借阅时长			,			
开始日期    到	旧田期		借阅		查询全部图书	ŝ		
ISBN	查询	学号			查询			
ISBN 书名 作者名	作者年龄	作者国家 出版商	出版日期	价格 原	车房号	库存		
<						>		
学号 姓名	地址	图书名	作者	借阅开始日期	借阅终止	日期		

然后就是 Java 程序代码的设计了,其实与实验二很像,只是实验二只做了查询,本次实验增删改查都要做,同样为每一个表的增删改查预先写好 SQL 语句,未知参数用?代替,等到获取了 UI 界面输入的参数后,再绑定给 SQL 语句并执行,获得的结果返回信息再传回给 UI 界面即可。总体视图如下,各个类的详细源代码见第四部分。

## ▶ 截屏给出程序界面,操作界面和操作结果

点击查询全部图书

#### 输入我的学号进行查询我所借阅的书籍

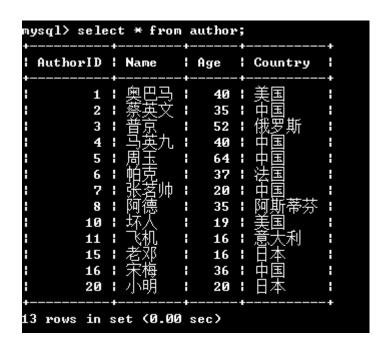

#### 输入一本书的 ISBN 号码进行该书详细信息的查询

## 插入操作(这里只以插入作者进行示范,图书和学生的插入类似)

🕌 Library Management System de	signed by ZhangMings	huai				-	$\square$ ×
出版日期		房间号 二	出版社 年	使	学 我 (s	÷ .	习 F
	删除 过 BN	借阅时长	ess Insert!	ilways i	makes me -Remai	inin	
开始日期	期日期	1	借阅		查询	全部图	书
ISBN	查询	学号				查询	
ISBN 书名 作者名	作者年龄(作者	国家 出版商	出版日期	价格	库房号	库存	房间
1		111;					•
学号 姓名	地址	图书名	作者	借资	开始日期	借阅	终止日期

去数据库进行查询,发现多了 author ID 为 20 的这个条目,于是成功插入

更新操作(这里也只以作者进行示范,其他类似,修改更新刚才插入的 author ID 为 20 这个作者的年龄为 20->27)

🖺 Library Manage	ment System designed	by ZhangMingsh	uai				-		×
□图书: ISBN 出版日期 ☑ 作者: 作者ID	楼层	作者 数 小明 年龄	全 房间号	出版社	使	学 我 /s	k /	习乐	
□ 学生: 学号 插入 学号	姓名 更新 B	地址	回信息: Succe 借阅时长	Study a	lways 1	nakes me -Remai		py !!!	, 
开始日期	到期日期		f	間		查询	全部图	书	
ISBN		查询	学号				查询		
ISBN ‡	3名 作者名 作	作者年龄 作者国	国家出版商	出版日期	价格	库房号	库存		房间
4			-				1		
学号	姓名	地址	图书名	作者	借阅	开始日期	借阅	终止日期	
			H127H		IBIA	D LVH H 127	THIP W	~ III H 701	

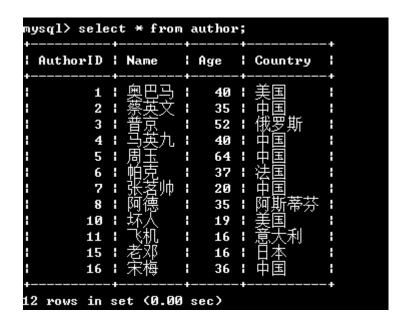

去数据库进行查询,发现 author ID 为 20 的这个作者的年龄改为了 27,于是成功更新

删除操作(这里也只以作者进行示范,其他类似,删除 author ID 为 20 这个作者)

🙆 Library Management System desig	ned by ZhangMings	huai				_		×
■ 图书: ISBN	<b>計格</b>	房间号	出版社 库房号 家	使	学 我 伤	会	习乐	
学生: 学号     姓名       插入     更新       学号     ISBN       开始日期     到期		借阅时长	Study au e Successfully! 普阅	lways 1	-Remai			,
			<b>育</b> 园		見は		113	_
ISBN	查询	学号				查询		
ISBN 书名 作者名	作者年龄  作者	国家出版商	出版日期	价格	库房号	库存	Ξ	房间
•		11)						<b> </b>
学号 姓名	地址	图书名	作者	借阅	开始日期	借阅	終止日期	

去数据库进行查询,发现 author ID 为 20 的这个作者已经不见了,于是成功删除

含外键关联则禁止删除 (删除作者 ID 为 7 的作者,由于 book 表中有一项书对应的作业 为 7 号作者,于是删除失败)

🙆 Library Management System designed by ZhangMingshuai	- □ X
■ 図书: ISBN	学 习 我快乐
学生: 学号       姓名       地址       Study always in the study always in	nakes me happy !!! -Remainin
开始日期	查询全部图书
ISBN	查询
ISBN 书名 作者名 作者年龄 作者国家 出版商 出版日期 价格	库房号 库存 房间
(	h
学号 姓名 地址 图书名 作者 借阅	]开始日期 借阅终止日期

借阅功能 首先查询一本书的库存,不妨查询 isbn 为 1000000005 这本书:

	查询					学号	查询		000005	10000
房间	库存	库房号	价格	出版日期	出版商	作者国家	作者年龄	作者名	书名	ISBN
212	3	2	99.99	2010-05-01	俄罗斯战争	俄罗斯	52	普京	论与美国的	1000000005
					1000 701 712	1000 771		10//	,	

可以看到,这本书的库存为3

填写借阅信息并点击"借阅"按钮,如下图:

🕍 Library Management System designed by ZhangMingshuai	- 🗆 ×
图书: ISBN   书名   作者ID   出版社   出版社   出版日期   价格   数里   库房号   様据   房间号   上作者: 作者ID   7   姓名   年龄   国家   使	学 习 我快乐
□学生: 学号      姓名      bb址      Study always	makes me happy !!!
插入 更新 删除 返回信息: borrow successfully!	-Remainin
学号     1140310606     ISBN     10000000005     借阅时长     10	
开始日期 2017-05-05 到期日期 2017-05-15 借阅	查询全部图书
ISBN     1000000005     查询     学号	查询
ISBN   书名   作者名   作者年齢   作者国家   出版商   出版日期   价格   1000000005   论与美国的 音京   52   俄罗斯   俄罗斯战争 2010-05-01   99.99	<u>库房号</u> <u>库存</u> 房间 2 3 212
	到开始日期 借阅终止日期

借阅成功后查询 1140310606 学号所借阅的信息

学号	姓名	地址	图书名	作者	借阅开始日期	借阅终止日期
1140310606	张帅	吉林松原	论与美国的持久战	普京	2017-05-05	2017-05-15
	15001		, a 33 cm a 313 c 71	1077	·	

然后再次查询 isbn 为 1000000005 这本书的相关信息,发现库存为 2,也就是少了一本书,说明借阅功能正确

# 四、程序代码

```
package com. zhangminghsuai;
import java. sql. Connection;
import java. sql. PreparedStatement;
import java.sql.ResultSet;
import java. sql. SQLException;
import javax.swing.table.DefaultTableModel;
/**
 * CreateDate: 2017-6-3 下午 11:12:18
 * Location: HIT
 * Author: Zhang Mingshuai
 * TODO
 * return
 */
public class Borrow {
    private String snumber;
    private String isbn;
    private String day;
    private String begindate;
    private String enddate;
    public Borrow(String snumber, String isbn, String day, String begindate, String
enddate) {
        this.snumber = snumber;
        this.isbn = isbn;

GUI. java(我的 GUI 界面通过 matisse 插件基于 swing 下的 jFrame 框架进行制作的,只需在面板上进行控件拖动,界面做好后保存自动生成代码,在此只给出核心按钮控制相关代码,不予以全部显示,因为自动生成的代码达到 1288 行,如下图,果真为 1288 行)

```
核心控制代码如下:
```

```
private void
searchbyISBNActionPerformed(java.awt.event.ActionEvent evt)
      // TODO add your handling code here:
     jTextField1.setText("");
     DefaultTableModel myModel = (DefaultTableModel)
jTable1.getModel();
     myModel.setRowCount(0);
     SearchISBN mys = new SearchISBN(Sisbn.getText());
     jTextField1.setText (mys.goSearch (myModel));
   }
  private void
searchbySActionPerformed(java.awt.event.ActionEvent evt) {
      // TODO add your handling code here:
     iTextField1.setText("");
     DefaultTableModel tModel = (DefaultTableModel)
jTable2.getModel();
     tModel.setRowCount(0);
     SearchBorrow mySearch = new
SearchBorrow(Sid.getText());
     jTextField1.setText (mySearch.goSearch(tModel));
   }
  private void
borrowActionPerformed(java.awt.event.ActionEvent evt) {
      // TODO add your handling code here:
     jTextField1.setText("");
     Borrow myBorrow = new Borrow (Bid.getText(),
Bisdn.getText(), Bday
            .getText(), Bbegin.getText(), Bend.getText());
      jTextField1.setText(myBorrow.goBorrow());
   }
  private void
ButtonDeleteActionPerformed(java.awt.event.ActionEvent evt)
     // TODO add your handling code here:
     jTextField1.setText("");
      if (jCheckBox1.isSelected()) {
         Delete myDelete1 = new Delete();
   jTextField1.setText(myDelete1.goBook(isbn.getText()));
     if (jCheckBox2.isSelected()) {
         Delete myDelete2 = new Delete();
  jTextField1.setText(myDelete2.goAuthor(Aid.getText()))
```

```
if (jCheckBox3.isSelected()) {
         Delete myDelete3 = new Delete();
   jTextField1.setText (myDelete3.goStudent (Snumber.getTex
t()));
     }
  private void
ButtonUpdateActionPerformed(java.awt.event.ActionEvent evt)
      // TODO add your handling code here:
      jTextField1.setText("");
      if (jCheckBox1.isSelected()) {
         Update myUpdate1 = new Update(isbn.getText(),
title.getText(),
              author.getText(), pr.getText(), pd.getText(),
price
                     .getText(), house.getText(),
countnumber.getText(),
               room.getText(), floornumber.getText());
         jTextField1.setText (myUpdate1.goBook());
      if (jCheckBox2.isSelected()) {
